

Autofocus USB & MIPI Cameras

e-con Systems has designed a wide range of autofocus cameras that help automatically change the camera's focus for capturing objects at varying distances. These cameras are available in both liquid lens and VCM lens variants, giving product developers the flexibility to choose the lens type of their choice. Our autofocus cameras are also designed to ensure low power consumption and fast focus change capabilities.

For learning more about liquid lenses and VCM lenses and the differences between the two, please give the below blog posts a read:

- [What is a liquid lens camera and how does it work?](#)

Over the years, we have customized and deployed a range of cutting-edge autofocus cameras using sensors from Sony, Onsemi, and OmniVision. We offer rolling shutter cameras with a high frame rate at resolutions ranging from 3.4 MP to 16MP.

e-con's autofocus cameras capture images with great details and come with 3A functionalities like autofocus, auto exposure, and auto white balance. It makes them perfect for embedded vision applications such as barcode scanners, [kiosks](#), [industrial handhelds](#), document scanners, etc.

To learn more about why one of our autofocus cameras is ideal for telepresence robots, dive right into the below article:

- [Why See3CAM_160 - 16 MP autofocus USB camera - is the perfect fit for telepresence robots](#)

These off-the-shelf autofocus cameras come equipped with a MIPI or USB interface. They can also be interfaced with processors including i.MX8 and other Linux/Windows-based x86 systems. In addition, we provide software applications for Linux and Windows for rapid and hassle-free integration.

One of e-con's key differentiators is our ability to offer extensive customization services to make sure our camera solutions meet your application's unique requirements. These include form factor changes, interface connector customization, lens mount modifications, enclosure design, and more.
